

Media Release: SPARK - Inspiring Precision

After an intensive development period, the engineers and designers at RIBAG have achieved another milestone with the SPARK collection: The new, miniaturised downlight family stages the architecture with precise light guidance. Timeless design and high lighting quality cultivate rooms and focus on the needs of the user. The individual design is simpler than ever before - SPARK convinces in form, function and application.

The miniaturised recessed luminaire is the ideal lighting tool for effective lighting concepts. With four different reflectors developed by Bartenbach Lichtlabor, SPARK offers superlative lighting technology. The wallwasher version is particularly impressive: it stages the wall with absolutely homogeneous light distribution and at the same time sets brilliant accents with a precise beam of light.

The outstanding feature of the entire downlight family is its low installation depth combined with high luminous intensity. Thanks to excellent glare control and high-precision light control, the new luminaire family solves the most demanding tasks in the field of professional lighting. With over a thousand different possible combinations, SPARK also offers the greatest possible scope for design.

A consistent system concept with maximum functionality, durability and energy efficiency, both as a lighting solution for residential and commercial applications.

Available immediately from selected specialist lighting retailers.
